

About Process Manufacturing Suite for Acumatica

Process Manufacturing Suite is a solution developed by eWorkplace Apps to let process manufacturers meet their manufacturing goals. The solution helps process manufacturers optimize the process leading to higher productivity and profitability with its functionalities. Process manufacturers can manage the formula/recipe, production process, intermediate/finished and assembly goods, physical property of the raw materials with laboratory module and many more. The solution lets the process manufacturers streamline their production and make their process agile.

Key Features

- Formulation management
- Enhanced and multi-level process of bill of material (create intermediate, finished goods and assembly type of BOM)
- Batch production and optimization (create mix, fill, assembly type of batch, rework and disassemble the batch if required)
- Formula revision and approval control
- Batch sizing, weighing sheets, yield tracking, handling losses (line-level loss, constant loss and loss factor)
- Batch based upon weight, volume and discrete unit of measures
- Support unit of measurement and UOM conversions, toggle UOM
- By-products and consumables control
- Laboratory Module- tracking & analysis of physical & chemical properties
- Cost analysis

Benefits and Values, PMS Deliver

- Control of formulas/recipes and related process bill of material to help meet customers' needs related to ISO, FDA, GMP and like obligations
- Integrated QMS system to ensure product quality from incoming/receiving, in-process to outgoing/shipment stages
- A robust MRP with planning and scheduling solution
- Support of lot traceability and recall
- Laboratory module to provide details related to physical/chemical make-up of products
- All built within Acumatica's leading cloud based (accounting, distribution and planning) solution
- Support of standard operating procedures as well as needed consumables
- Solution is easy to implement and use

Ideal Customer

- Process Manufacturers
- Manufacturing Industries like: Food and beverages, pharmaceutical, personal care and cosmetics
- Needs access to manage formulas and recipes based upon weight, volume and discrete units
- Desires to manage multi-level process bill of materials
- Requires streamlining the production process and improving the batch processing
- Requires production using batch tickets and an integrated quality system
- Needs to control material using both volume and weight unit of measure when density is needed
- Needs to control/have details related to the chemical make-up of the item for reporting and labeling purposes

Differentiators

- Natively built within Acumatica
- Fully integrated into critical ERP functions
- Fulfilled by Acumatica, certified and part of the always current program
- Company 100% dedicated to Acumatica
- Exceptionally customizable

Qualifying Questions

- Do you need integrated PMS software?
- Do you use Acumatica as an ERP solution?
- Do you need to boost production agility?
- Do you require managing formula and recipe?
- Do you use weight and volume units of measure?
- Do you desire an integrated production system, work with formula's based upon weight and volume, require to focus on batches and yield?
- Is density a factor in creating formulas?
- Do you have losses at line and material level, production and constant losses?
- Are you tracking yield?
